WORKING PAPERS

The Effects of E-commerce on Local Labor Markets How has the expansion of e-commerce over the past decade affected labor markets? Utilizing the variation of state legislation on e-commerce sales tax collection -the Amazon Tax- which reduced out-of-state e-commerce retailers' price advantage, I find declines in employment and wages in e-commerce complementary sectors, such as warehousing and last-mile transportation. In the retail sector, I observe declines in local employment and the number of establishments. Effects in retail are heterogeneous by sub-sector. While big box retail employment increases, other brick-and-mortar retail employment decreases. As the Amazon Tax may induce brick-and-mortar retailers to incorporate online channels, I analyze changes in retail occupational structure. In non-urban areas, I find an increase in the share of office and service occupations and a decrease in the share of sales and related occupations. Through a general equilibrium model, I find that these results are consistent with an economy in which consumers substitute e-commerce purchases for big box purchases, which leads to the crowding out of other brick-and-mortar retail.
