### JOB MARKET PAPER

"Trade in Intermediates and US Manufacturing Emissions"

This paper examines the impact of intermediate trade on air pollution emissions. I build a quantitative model of heterogeneous firms with intermediate trade, emission, and technology adoption, which shows that lower intermediate trade costs reduce emissions both due to cleaner technology adoption and reallocation towards cleaner firms. The empirical analysis tests and finds support for the model prediction on the determinants of aggregate emission intensity using US manufacturing panel data. A quantitative analysis shows that the decrease in intermediate import cost alone can explain about 10% of the observed reduction in the energy-usage-related aggregate emission intensity for nitrogen oxide ( $NO_x$ ) in the US between 1997 and 2014.
