#### JOB MARKET PAPER

Government Banks and Interventions in Credit Markets (with Gustavo Joaquim and Jose Renato Haas Ornelas)

We study a large scale intervention in the Brazilian banking sector, characterized by a sudden increase in the supply of credit provided by commercial government banks. Theoretically, the effects of this type of policy are ambiguous: the policy can be beneficial if credit is inefficiently low, or harmful if public banks finance riskier firms with unproductive projects. We use confidential credit registry data to document a series of empirical facts and test if the policy alleviates inefficient underprovision of credit. We show that while the policy leads to a reduction in private banks interest rates and to an increase in total credit, public banks experience worsening of loan default risk. In particular, government banks subsidize more levered firms, and loans to indebted firms explain differences in loan default between public and private banks. Moreover, neither the increase in total credit nor the reduction in interest rates of private banks has effects on GDP and employment growth. These findings suggest the policy did not ameliorate inefficiently low credit, but rather was associated with credit misallocation.
